## CATALOGUE 2022

Branded promotional clothing & workwear

## BRANDED CLOTHING for the whole Europe

Dear business partners

We are pleased to present you with a new edition of the catalogue of our products. It was being created in turbulent times. Big thanks go to you all who went through this difficult period together with us and continue to be our partners. We strived to be a firm anchor for you even in this hard time, a partner which you can rely on and which is able to provide its services in a stable way and of high quality under any circumstances. We promise that you can rely on us in this respect in the future as well.

The 2022 catalogue brings interesting new items in all the segments. Since we care about sustainable business, we are particularly proud of our new collection of clothes made of recycled polyester, which will complement the existing products made of organic

cotton. You will also be close to nature with our T-shirts made of merino wool of supreme quality or with a bamboo collection of terry towels.

Although nobody of us can predict future developments, I believe that the worst is already behind us. We are here for you in 2022, too. After all, the number two, which is represented amply in this year, symbolises in numerology, among other things, cooperation, consideration, social awareness, and effort to reach concord and harmony. We offer you exactly that and much more. The entire Malfini team is ready to comply with your wishes and requirements.

We sincerely thank you for your support and we look forward to another year with you.

**Radek Veselý**

Chairman of the Board of Directors

# SOCIAL RESPONSIBILITY

## and sustainability

### PEOPLE AROUND US

We are responsible towards people around us. We care about everyone who lives where we operate. We think with humility of people in need, whom life has put difficult health obstacles in their way. We make no difference – that's why we help children in a distant Bangladeshi slum equally as those in our country attain education. Maybe, you don't even know but you often take part in it with us as you can find our T-shirts in a broad range of charitable events.

### OUR EMPLOYEES

We are responsible towards our employees. We esteem them profoundly and we want them to feel that the work they do is really meaningful. We surround them with an inspiring environment where they can grow professionally, find security in life, get fair remuneration and enjoy employee benefits. We do our best to ensure that they like their jobs and, simultaneously, they have enough time to devote to themselves or to their families. In fact, only contented people are contented employees as well.

### THE EARTH

We are responsible towards the Earth. We bear in mind the future of our children and that's why we keep minimising the environmental impacts of our business. We utilise solar energy increasingly more, we reduce the negative effects of transport and minimise waste. As a proper clothing company, we tirelessly look for new textile products that have the least possible negative impact on our planet.

### SUSTAINABLE GROWTH

We are economically responsible. Towards you, our customers and suppliers, as well as towards the shareholders and rivals. Everything we do is subordinated to our corporate values and ethical code. We aren't interested in rapid success, we aim at ensuring long-term sustainable growth of the company.

# EXCLUSIVE MATERIALS

## and certifications

### RECYCLED POLYESTER 12

Can an synthetic material be considerate to the environment? Yes, but it isn't so straightforward as one might think. After all, that's why our exclusive products bear GRS certification. Not only does it certify that they are made of recycled polyester but it also guarantees that the production took place considerately to both the workers and nature.

### ORGANIC COTTON 14

There are hardly any certifications that are so comprehensive and trustworthy as GOTS. It doesn't forgive anything that harms nature or humans. It monitors the life of cotton from the seed all the way to your hanger. It oversees eco-friendly and ethical growing, processing and even distribution. By wearing clothes with this marking you contribute to better life of people across the planet as well as to a more friendly approach to the environment.

### SUPIMA® COTTON 157

Premium fashion deserves the very best materials. SUPIMA® cotton is rightfully considered as the cotton of the highest quality in the world, which is owing not only to the unique properties of this North American variety but also to the method of its cultivation. The cultivation shows respect to nature, soil and humans, for which the plant will repay them with fibres of double length and strength during harvest. As a result, products woven from SUPIMA® cotton feature extraordinary resilience and softness. So, they last much longer than clothes made of ordinary cotton. What's more, they're really great to wear.

### MERINO WOOL 155

The very first look at shaggy merino sheep will reveal that they've been bred specifically to produce wool. To this day, they have been kept in natural conditions in the open air where they enjoy clear water, the sun and juicy grass. However, you won't find them in lowlands, you have to go to the mountains to see them. It is just life at high elevations that lends unique properties to their especially fine wool. In summer it's breathable while in winter, by contrast, it'll warm you up. Thanks to its elasticity, it will adapt to your body and it even helps neutralise unpleasant smells.

### OUR CERTIFICATIONS:

Intertek 149203-GRS – Recycled materials having this certificate have a proven origin, are made with respect to humans and nature and, of course, their safety can be completely relied on.

GOTS – CU 1033786 – This globally recognised certification rigorously oversees products made of organic cotton. It guarantees that everything is grown and produced not only in an environmentally-friendly but also ethical manner.

With an international Oeko-Tex Standard 100 certificate you're certain that your clothes are completely harmless to health.

### CERTIFICATION OF OUR SUPPLIERS:

Production and trade should be transparent and sustainable. That's why this association oversees all over the world that the production and sales comply with all work, legal and ethical principles.

WRAP certification is a recognised symbol of fair production that observes statutory, humane and ethical regulations.

# BRANDS

## BRANDS

### **MALFINI®** 28

Real products for real people

The Malfini brand, that's precisely manufactured and high-quality clothes for wearing in a city and in the great outdoors. Set off wearing a new outfit to work, for amusement, do sports or meet your friends. You can choose from a broad range of colours, diverse cuts and pleasant materials. In addition, you can easily complement them with your personal print or embroidery.

### **MALFINI Premium®** 150

In each detail

Enjoy a touch of exclusivity. Our supreme brand, Malfini Premium, will win your favour thanks to its select materials, sophisticated cuts and elegant colours. You'll find exclusively cotton and wool of premium quality in it, which will please you with its fineness and superior resilience.

### **Piccolio®** 140

For every moment

With the Piccolio brand you'll easily arrange for both printing and embroidery on clothes for every occasion. In fact, we've adapted the products of this line for easy branding and given them cheerful colours, on which crazy graphical design looks good as well. Thanks to tear-off labels you have got your own collection of T-shirts within reach.

### **RIMECK®** 180

Workwear made real

How can you combine high demands concerning resilience with fashion trends? The Rimeck brand knows! Our clothes will stand the test when you're in full engagement and, in addition, they look great. We are very particular about the design, resilient workmanship and materials. And what is the most important – we put your safety in the first place.

# re-VOLUTION

## recycled collection

Each of us can help The Earth. It is necessary to change the approach to sustainability. For example, by starting to wear clothes made of recycled materials more.

Endless tonnes of waste devastate nature, fill the oceans, forests and mountains. And that's why it is important to pick up every plastic bottle and give it a chance for a new life. It may become a valuable raw material in the production of clothes.

Recycled materials are the future of the clothing industry. It's up to us to give them and our planet a chance. When we now support recycled products, we'll change the whole future together. And it's worth it.

All of us can help nature!

# GOTS

## organic collection

Every product that bears the Global Organic Textile Standard marking meets the most stringent rules for growing and producing organic textiles. Respected GOTS certification guarantees eco-friendly and ethical production and organic quality of the actual products worldwide. So, it protects responsibly the environment, the health of employees and those who wear organic-cotton clothing. Seeding, tending to the plants, harvest and fiber processing must be done without chemicals.

Only species without genetic modification are cultivated at farms, and the soil obtains nutrients from farmyard manure and compost. Artificial fertilisers, pesticides or insecticides aren't used, and natural procedures are only applied. Simultaneously, GOTS oversees fair and safe working conditions for all the employees in the field and in the factories. Thanks to this certification you're sure that you wear really ethical clothes.

## LABEL FREE collection

Imagine a T-shirt as a clean cloth on which your imagination will blossom in full. Products of the Label Free line are already waiting for you to light them up with your own original prints or embroidery. You and your author collection will always play the lead role as you can easily add your own tag to all the products. You would look for a tag with the Malfini brand in vain because the clothes haven't got any. So, you don't have to take it off in a complicated manner and you can focus on your own design instead.

We have taken great pains to ensuring high quality of the materials and modern cuts. Thanks to the silicone finish, our textile items are smooth to touch, have silky gloss and, above all, retain their colour for a long time. Let your creativity loose and become a fashion icon!

# SAILOR collection

After all, stripes were already loved by Coco Chanel

Some patterns simply don't get old. And stripes are definitely one of them. Ride a wave of timeless fashion and choose from sailor's items for adults and children.

Vests or T-shirts will not only stylishly underline an outfit for a boating trip but they'll also be greatly suitable for wearing in the city, for a meeting or a party. High quality and precise execution of cuts are a matter of course. Print a team slogan or logo on to them and lift anchor. Set sail!

807 **SAILOR LS** 55

# KIDS collection

Kids also want to be cool! We've put together a modern collection just for them in stylish colours, which will impress all girls and boys aged from 4 to 12. We've designed T-shirts, sweatshirts, tracksuits, shorts or jackets in such a way to complement our offering for adults.

Show that you belong to each other and choose items for both small and big children. In discovering the world together you won't be stopped by any kind of weather, we've got function materials and comfortable styles in reserve. Grab a colourful backpack, put on a cap and set off to school, to explore nature or for entertainment in the city.

# MALFINI®

Real products for  
real people

---

Malfini brand portfolio is rich and, in particular, cleverly compiled. That's why you will enjoy clothes of this line both in a busy city and in a calm place in the great outdoors. Thanks to a variety of materials, styles and colours you'll find among them a perfect outfit for use at work, for doing sports or, for example, for use in a café. You can also match up your clothes in a pair or in a group as we manufacture our clothing mostly in a duo or family concept.

# T-SHIRTS

---

First T-shirts were designed at the dawn of the 20th century, and quickly became a part of military uniforms and common for blue-collar workers because of their practicality. Branding T-shirts with print came later from Disney with their iconic

Mickey Mouse T-shirts. Over time, more studios, companies and even rock bands joined in on the trend and in just a century, a piece of practical clothing became a space for self-expression and even art.

### SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

slim fit cut with side seams  
V-neckline  
neckline trimmed with shell fabric  
short raglan sleeves

### ELASTANE

Fine and strong, yet elastic polyurethane fiber. The key feature is its high elasticity, as elastane can be stretched out from three up to seven times of its original length - without breaking. It is always used in combination with other fibers to ensure dimensional stability, increase elasticity and reduce the wrinkling of the final fabric.

\* Material composition may differ: colour 12 - 85 % cotton, 15 % viscose

New colour. More information about stock availability will be provided by our sales department.

# POLO SHIRTS

---

Soon after the first plain T-shirts, ones with collars came in early 20th century. Designed to replace the impractical white shirts as the standard for sports clothing, various version of these collared T-shirts enjoyed great success in sports like golf, tennis

or polo, which gave them the name – polo shirts. Eventually, these became common even outside sports, becoming a fixture in every wardrobe, and a pillar of the “smart casual” style.

## PIQUE POLO 203

\* Material composition may differ: colour 03 - 97 % cotton, 3 % viscose; colour 12 - 85 % cotton, 15 % viscose

# SHIRTS

---

Shirt is one of the oldest articles of clothing still around. While originally part of the undergarments, by the end of the 18th century it was common at social events, and during the last century, shirts

entered the ladies' wardrobe as well. Modern designs combine various materials, from poplin and plain weave to patterned twill, with different cuts, all in order to reach perfect comfort.

## CHIC 207

Men's Shirt

# SWEATSHIRTS

---

In the 30's, sweatshirts were designed to deal with practical concerns of manual labourers working in colder weather. Originally simply thicker, long-sleeve T-shirts, they protected workers from the weather without limiting their movement or

comfort. Sweatshirts enjoyed a boom starting in the 70's as a part and symbol of the hip-hop culture, a tool for the lower classes to express themselves.

CERTIFIED BY INTERTEK  
149203-GRS

### RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, polyester clothing and other waste material). The advantage is the consumption of less energy during production and they leave a lower carbon footprint.

New product. In stock: First quarter of the year 2022.

# FLEECE

---

Half-way through the 20th century, first concerns with the sustainability of the textile industry came up – and with them, the invention of fibers from recycled plastics, like polyester, polyamide and elastane. They were

quickly developed for many applications, and fleece was among those. Popular for sports and outdoor activities as an isolating, heating layer, fleece also gained recognition for use in standalone comfort clothing.

# OUTDOOR

---

Clothes meant for the outdoors need to have mechanical durability, wind and water resistance with good thermal isolation – while also being breathable. The breakthrough combining all of these is softshell material, introduced in the 70's.

Thanks to its universal properties, it replaces layered clothing approach. Softshell is constructed to balance all requirements, and offers perfect protection against the weather.

### NANOTEX® RESISTS SPILLS

Certified fabric which has been fundamentally transformed through nanotechnology. The resulting fabric repels liquids, thus extending the lifetime of the jacket and helping it retain the natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

# ACTIVE

---

Coats, shirts and uniforms used as sports clothes of the past century had strict rules for how, and from what, they were made. As sport became an integral part of the modern lifestyle, as an escape from the everpresent stress – a way to relax

both body and mind – sports clothes changed. Comfortable, airy and functional are the new rules, leading to rising use of cutting-edge, quick-drying and breathable, fabrics.

# CAPS & SCARFS

---

A trend that is with us for over 150 years, first head covers with a visor were a part of baseball uniforms, protecting the players from the sun glare. These caps, with the team logo, first spread

among the fans, then quickly into the wardrobes of millions. Today, caps come in many shapes and sizes – straight or arched visor – but they are still trendy as ever.

# TERRY & BAGS

---

Accessories like these are daily necessities and are even serving as home décor. The towels as we know them today - with looped fabrics designed to absorb water while being also pleasant to the touch were preceded by light and straight fabrics.

Similarly, bags also used to be plain and utilitarian while now, they come with designs, patterns and colours, becoming a fashion accessory and one of the most popular promotional items.

bag dimension 45 x 40 cm, straps 70 x 2,5 cm

# MALFINI PREMIUM®

In each detail

---

When it comes to exclusive clothes, there's no place for compromise. That's why our Malfini Premium brand reflects the latest trends, excellent quality plays first fiddle and unique natural materials are the basis. It's only in this way that we'll interest you, the most demanding customers. You'll combine premium outfits for Urban fashion, office or for entertainment precisely according to your taste. For instance, in vivid colours, current shades or timeless neutral tones.

If you rank among those who like exceptional natural fibres, SUPIMA® cotton will be the right choice for you. This variety is cultivated in mere 1% of the land from the total area where cotton

is produced. It has got twice longer and stronger fibres than ordinary kinds, so it is extremely resilient and soft. Premium merino wool is a similar case. The sheep out of which this premium fibre originates live in a clean mountain setting, which lends a unique character to their fine wool.

All the clothes from Malfini Premium brand will win your favour with their quality and modern look. Malfini Premium brand products have been designed in a duo concept. You can easily adapt it with printing or embroidery to your company or club. You can give members of your team and business partners pleasure in wearing outstanding materials, while strengthening the value of your brand.

# MERINO

## Characteristics

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers. The reason for these qualities is the size of an individual fiber – and merino wool fibers are very fine, thinner than 18 microns. As such, it is used in every area of fashion from haute couture robes to highly functional garments.

This natural wool is sheered from the Merino breed of sheep, kept in natural environment (open field), with most of the production comes from Australia, New Zealand and Argentina. Because sheep don't stop growing wool, they need to be sheered every year. Not only is wool a renewable resource, it is also biologically degradable – after you throw it out, it will decompose and provide soil with nutrients.

### HOW TO TAKE CARE OF IT

You can use washing machine up to 40°C temperature, making maintenance easy. Of course, we recommend washing inside out and with similar colours. To preserve the shape, avoid drying in direct sunlight and heat, and iron using only steam at medium temperature. If your merino clothing catches a slight odor, just airing it properly should be enough to remove it.

#### BREATHABLE

*Wool fibers can absorb a lot of moisture and lead it away from the body, and merino wool is even better at it.*

#### THERMO REGULATING

*Unlike synthetic materials, merino fiber is active and reacts to changes in body temperature. It retains heat when the weather is cold, and cools the skin when it's hot.*

#### ODOR RESISTANT

*Merino wool has antibacterial effects and absorbs sweat. Clothes from it stay nice and fresh much longer, even in rougher conditions.*

#### NATURALLY ELASTIC

*Each fiber works like a small "spring", expanding and contracting back into shape. The fabric, as a result, doesn't wrinkle.*

#### PLEASANT TO WEAR

*The fine, flexible fibers of merino wool make it very comfortable overall. It is soft to the touch, pleasant to wear even directly on skin, unlike most other types of wool.*

## MERINO RISE 157

T-shirt Men's

Single Jersey, 100 % merino wool

17,5 µm, machine wash

▲ 190 g/m<sup>2</sup>, S - 3XL

# RIMECK®

## Workwear made real

---

Working clothes aren't decided on just by high demands of professionals who wear them every day. Fashion trends rule there as well. It's no wonder; after all, we spend most time of the day at work and deserve to look and feel good. That's why we keep moving the boundaries, devoting ourselves to design, improving the quality, style, functionality and, above all, safety in the Rimeck brand. Our HIGH VISIBILITY line is ideal wherever safety at reduced visibility is of paramount importance.

After all, its qualities are certified by certification based on European standards. In addition, the new VERTEX collection is a perfect example of how customers' needs are reflected in our products. We left nothing to chance when designing them and didn't allow any compromise. So, whatever you experience during your work commitments, you'll appreciate their resilience, smart design and function materials.

fixing shoulder seams

shorter sleeves

00 94 01 02 05 15 06 95 04 11 07 47

### PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

## BASE R06

T-shirt unisex

Single Jersey, 100 % cotton

160 g/m<sup>2</sup>, S - 3XL

durable, ideal for work environment

tubular cut

01	01	01	01	01	01	01	01	01	01	01

### RIP STOP

Very strong, regularly repeating weave. In this smooth fabric, thick warp and weft threads are interwoven in intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This apparent grid significantly increases the fabric's resistance to ripping and tearing.

New colour. More information about stock availability will be provided by our sales department.

### SAMPLE PACK

Custom mix of MALFINI® and MALFINI Premium® products with **25 % DISCOUNT**.

#### How to order Sample Pack:

*Minimum amount of selected products is 10 pcs (max. 1 pc of colour and size)*

*You can order your own Sample Pack up to 4 times per year under the conditions above.*

*Orders are possible only with help of our Sales Department (e-mail: [dev@malfini.com](mailto:dev@malfini.com))*

# PRINT & embroidery

## PRESSING

Suitable for 100% cotton products without buttons and zips that could be damaged by the pressure. This technology enables pressing of products into a shape chosen by you so you get an unusual gift or promotional item. You can select from our library of shapes or send us your own design.

## GLITTERING STONES

This special technology can be used for any design size and colour combination. The transparent or opaque stones are available in sizes from 1,5 to 8 mm. The minimum order for textiles with this application is 200 pieces. Products decorated this way have to be washed inside out at up to 40 °C.

## DIGITAL PRINTING

An ideal technology for orders of a low quantity. A direct print is made on a state-of-the-art KORNIT® printer by using special water-based pigmented inks. The printing is of a photo quality and resolution and is guaranteed to be wash-resistant up to 40 °C. The textile can be ironed from the reverse side.

## SUBLIMATION PRINTING

Is suitable for textiles made of at least 65% synthetic fibre. Disperse dye is printed on a sublimation paper underlay from which it is transferred to the textile in the form of vapour by using heat and pressure. The stability of colours is very good, imitations (significantly more expensive) of colourful woven goods are barely distinguishable from originals. In addition, the original material properties such as breathability and washability are preserved. This printing method is ideal for transferring photographs and is suitable for piece as well as serial production.

## SILK-SCREEN PRINTING

The oldest and so far the most effective textile printing technology. We use a machine which enables us to reach high daily production (up to 15 000 prints) while maintaining the same print quality from the first to the last print of the order. Thanks to this technology we are able to print practically any motif - from the simple and monochromatic to the photo-realistic one. The printing is guaranteed to be wash-resistant up to 40 °C. The printing can be ironed from the reverse side.

## TRANSFER

Method where the design is first printed, using silk-screen, onto a transfer foil, fixed by glue and then transferred from the foil to the textile with heat and pressure. It's a very versatile method, usable on almost any textile, and is used mainly when direct silk-screen print is not possible. Only water repellent materials are unsuitable for this type of printing, and the printed clothes can be ironed from the other side.

## LASER ENGRAVING

The modern technology allows engraving on the textile by using a laser beam. It is unique and so far uncommon branding of fleece products. The final motif is burnt into the fabric (it's plastic) and so lasting forever. Since there is no paint or yarn application, the resulting graphic is unicolour - same colour as the textile.

## EMBROIDERY/EMBROIDERED PATCHES

This is a very high-quality way of presenting motives, logos or slogans on textile products. To be able to sew a certain motif onto a product we have to create an embroidery pattern for which we need to get a high-quality digitized model (.tif, .cdr, .pdf, .ai, .epg). Then your design is transferred into the sewing machine's program and is embroidered either directly on the product, or in the form of a patch sewn or glued on it.

# MATERIALS

## Fabrics and finishes

### SYNTHETIC MATERIALS

#### ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

#### POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

#### POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as polyester. Mechanical and chemical treatment influences the final product's properties.

#### POLYPROPYLEN

Smooth and hard surface fibres have high abrasion resistance. They show good hydrophobic properties which, due to very low water sorption, preserve the strength and dimensional stability of the material even in damp environments. The final material is lightweight and shows good thermal insulation.

#### POLYETHYLEN

Currently the most widely used polymer in the world, characterized by high strength, friction resistance, zero moisture content and chemical resistance. Thanks to its properties it is ideal for the production of safety protective equipment protecting against mechanical influences and wear.

#### RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, polyester clothing and other waste material). The advantage is the consumption of less energy during production, they leave a lower carbon footprint and reduce environmental pollution. By recycling we achieve the same quality and properties as with ordinary polyester.

### BRANDED MATERIALS

#### SUPIMA®

The brand represents the finest cotton of 1% worldwide production. This type of the US grown Pima cotton has over a hundred years' history. Its unique extra-long fibers are twice the strength of regular cotton. They are resistant to pulling, breaking and tearing which makes products made of it incredibly smooth, resistant, non-pilling and keeping their appearance for a long time.

#### Nanotex® Resists Spills

Certified fabric which has been fundamentally transformed through nanotechnology. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

### NATURAL MATERIALS

#### COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

#### ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India, the USA and China.

#### BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

#### MERINO WOOL

Active fiber that regulates body temperature changes and is one of the most breathable natural fibers. The fiber can absorb large amounts of moisture - along with odour molecules in the sweat. Natural elasticity maintains dimensional stability, and the fabric is easy to maintain.

#### VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorption features. Compared to cotton, it is softer, shinier and finer.

### SOFTSHELL

Softshell is a laminated textile for modern and sports plain weave and plain weave for outdoor activities. It is divided into membrane and non-membrane. Plain weave made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

### CORDURA® CLASSIC

The CORDURA® fabric is made in accordance with approved standards of the company INVISTA. CORDURA® holds of stains, resists tears and abrasions like no other fibers. Its strength ensures high longevity; CORDURA® is a registered trademark of INVISTA for durable fabrics.

### 3M™ STRIPES

3M retroreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3M™ technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm<sup>2</sup> of the fabric there are up to 30,000 glass beads.

### SEGMENTED STRIPES

Retroreflective stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

## FABRICS

### SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

### SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

### PIQUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and plain weave ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

### INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and plain weave ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

### DOUBLE FACE

Double face knitting also called double-sided. The wave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction.

### GRID KNIT

Quick-drying, breathable knit for the production of modern, functional clothing. The special grid structure perfectly moves moisture away from the body and expands it onto the fabric surface for fast drying, making it feel fresh, dry but also cooling the body. High elasticity ensures maximum comfort during wear.

### RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 11 or 22. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts.

### FRENCH TERRY – not brushed

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strength, absorption as well as the volume of the fabric.

### FRENCH TERRY – brushed

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

### STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has antipilling finish.

### FLEECE

Weft knitted fabric characteristic with brushed dense teased soft surface on both sides of the material. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with antipilling finish. Products are suitable for embroidery and laser engraving.

### PLAIN WEAVE

Plain weave fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Plain weave fabrics are manufactured from high quality combed cotton or polyester.

### POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough. It is made by a plain weave wave which has a higher amount of warp than weft threads.

### OXFORD

Wave derived from canvas wave. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic yarns.

### RIP STOP

Very strong regularly repeating wave. In this smooth fabric are interwoven thick warp and weft threads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

### TWILL

Wave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill wave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matte appearance.

### TERRY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton.

### NONWOVEN FABRIC

Fabric produced without knitting or weaving. Input material is a polypropylene polymer melt. The result is a smooth, flat, porous fabric with a relatively high tensile strength and low abrasion and bending strength. The material is popular in the industry due to low acquisition costs and good filtration and insulation properties.

### FINISHES

### PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

### MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Mercerization results in higher strength and better color stability of the material.

### SILICONE FINISH

The silicone finish is similar to the effect of fabric softener, however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

### ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

### PU FINISH

A long-lasting polyurethane layer that is applied from one side of the base fabric. It provides water, moisture resistance, abrasion and dirt resistance. Due to the special composition, the layer is very flexible, lightweight and does not negatively affect the other properties of the product.

### PA FINISH

Acrylic treatment is used to improve the mechanical and practical properties of the fabric. It is mainly used in outdoor clothing and is characterized by wind resistance and tensile strength.

### TPU LAMINAGE

Durable top layer made of thermoplastic polyurethane ensures stability of material properties in a wider range of conditions. The combination of the TPU membrane and the top material maintains the flexibility of the product and provides waterproof and abrasion resistant surface with excellent bend and tensile strength.

### SILVER COATING

A special matte silver coating applied from the inside of the fabric improves the functional properties of the material. It increases water resistance, prevents transparency of the top material and increases resistance to damage potentially caused by washing.

### ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt, which you will appreciate especially in the work environment. Dirt or grease make the droplets on the treated fabric that can be easily wiped off, thereby extending the life of the product.

**KIDS**

## CONCEPTS

### FAMILY CONCEPT

Product available in gents, ladies and kids style.

### DUO CONCEPT

Product available in gents and ladies style.

## NOVELTIES

### NEW PRODUCT

For information about stock availability please contact our sales department.

### NEW COLOUR

For information about stock availability please contact our sales department.

## MATERIALS

### ELASTANE

A synthetic fiber that contains polyurethane bonds of high elasticity.

### ORGANIC

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes.

### MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers.

### THREE-LAYERD SOFTSHELL

Three-layerd softshell with membrane

### DOUBLE-LAYERD SOFTSHELL

Double-layerd softshell

### RECYCLED POLYESTER

The fibers are made by recycling consumer plastics.

## TYPES OF LABELS

### TEAR OFF

Tear off label.

### STICKER LABEL

Label in a form of a sticker. Can be easily taken off.

### LABEL FREE

The products have only a small size label behind the neck for easy rebranding

## MATERIAL PROPERTIES

### WINDPROOF

Windproof material prevents wind and chills from penetration.

### WATERPROOF

Rating in millimetres to indicate material's resistance to water pressure. The higher the water column is, the longer the fabric will remain waterproof.

### EXTRA DRY

Extra dry material.

### BREATHABLE

Rating in g/m<sup>2</sup> per 24hours. The ability of a fabric to allow moisture vapor in grams in square meter per day. The higher the value is, the better fabric breathes.

### COOL/WARM

Soft, easy care, quick-drying and conductive fabric.

### THERMOREGULATION

Keeps you warm when it's cold and reversed.

### ODOR RESISTENCE

Thanks to moist absorption it keeps sweat out of your skin and therefore it's antibacterial. The clothing stays fresh longer.

## MATERIAL FINISHES

### SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however more lasting. It makes the product soft to the touch, more dirt-proof and the prints hold much better.

### ANTIPELLING FINISH

The antipilling finish lowers the pilling tendency of the fabric.

### ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt.

## TYPES OF SEAMS

### FLAT SEAMS

Double-sided cover stitch which is flat ensures maximum wearing comfort.

### TAPED SEAMS

Technology supporting the waterproofness of material at seams. The waterproof tape is applied thermally under pressure over the inside seams.

## MULTIFUNCTION PRODUCTS

### 3 IN 1

Multi use jacket can be worn as one whole winter jacket, or separately as a windbreaker and a fleece

### 4 IN 1

Multi use Hi-Vis workwear jacket can be worn as one whole, upper and inner part separately, or just the upper jacket without sleeves as a vest

# RIMECK®

**Selected garments from the collection HIGH VISIBILITY (HV) Rimeck correspond to the international standards, which determine the optimal form of protective Plaining with high visibility. Certified garments from the HV collection are supplied with a leaflet providing information on proper storage, treatment and purpose.**

**EN ISO 20471:2013** – High visibility Plaining – this international standard specifies requirements for Plaining with high visibility, which is able to visually indicate the presence of a user for vehicles or other mechanized means of transport under any light conditions, both in daylight and when illuminated by headlights of vehicles at night.

**High visibility Plaining are made of fluorescent material, and in combination with reflective stripes are divided into three categories:**

**Category 3** – the highest level of protection – the minimum required substrate surface is 0.80 m<sup>2</sup> and 0.20 m<sup>2</sup> of retroreflective material.

**Category 2** – the medium level of protection – the minimum required substrate surface is 0.50 m<sup>2</sup> and 0.13 m<sup>2</sup> of retroreflective material.

**Category 1** – the minimum level of protection – the minimum required substrate surface is 0.14 m<sup>2</sup> and 0.10 m<sup>2</sup> of retroreflective material.

**EN 1150:1999** – Protective Plaining – caution Plaining with high visibility for non-professional use – standard specifies requirements for optical properties of caution high visibility Plaining suitable for adults or teenagers, not for professionals. The garments are designed for visual indication of the presence of users in all light conditions, both in daylight in urban lighting and when illuminated by headlights of vehicles at night.

**EN 343:2003+A1:2007** – Protective clothes – Rain protection – European standard determining the properties of fabrics and seams of a protective garment. The characteristics of these are measured for the outside of the clothes. After achieving the specific permeability requirements and reaching the appropriate certification, it provides protection against water penetration and resistance against steam penetration for the wearer.

**EN ISO 13688:2013** – Protective Plaining – this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

**EN 14404:2004+A1:2010** – Personal protective equipment – Knee pads for kneeling work – The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

**TYPE 2** – foam plastic or other filling material in trouser pockets, or permanently attached to trousers.

**LEVEL 0** – only suitable for use on a flat surface – does not protect against punctures

**LEVEL 1** – suitable for use on flat or uneven surfaces – protection against puncture with a force of at least (100 ± 5) N

**LEVEL 2** – suitable for use on flat or uneven surfaces in demanding conditions – protection against puncture with a force of at least (250 ± 10) N
